Subject: rush: Importance: High

Hi Paula,

Could you please authorize the following rush search for an amendment which is due?

Thanks, Jennifer

STIC:

Please search SEQ ID NOs: 1; 1 (101-1176); 2; 3; 4; 5; 6; 6 (101-853); 6 (853-1176) from **10/608,504** in pending and commercial databases. They are species of one another and I need all of them searched.

Thanks, Jennifer Graser REMSEN EO3 B09/ 3C18 mailbox AU 1645 272-0858

VOIDITELY NESOTE I GEODECKI VIII I LEE CONTRACTOR LE CONTR
> I am an examiner in Workgroup: Example: 1610
> Relevant prior art found, search results used as follows:
☐ 102 rejection
☐ 103 rejection
☐ Cited as being of interest.
Helped examiner better understand the invention.
Helped examiner better understand the state of the art in their technology.
Types of relevant prior art found:
☐ Foreign Patent(s)
 Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
> Relevant prior art not found:
Results verified the lack of relevant prior art (helped determine patentability).
Results were not useful in determining patentability or understanding the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                              /clone_lib="CEEQRBN13"
/clone_lib="CEEQRBN13"
/clone="Organ: ovary; Vector: pBluescript II KS(+); Site_1:
/note="Organ: ovary; Vector: pBluescript II KS(+); Site_1:
/constructed from 1 million independent clones. cDNA
synthesis was initiated using an oligo(dT) primer, using
methylated C in the first strand synthesis reaction.
Following this first strand reaction, double-stranded cDNA
was blunted, ligated to NotI adapters, digested with
ECORI, size-selected, and cloned into the NotI and ECORI
compatible sites of a custom modified MCS of the
pBluescript (KS+) vector. The library was normalized in 2
rounds using conditions adapted from Soares et al., PNAS
(1994) 91: 928-9232 and Bonaldo et al., Genome Research 6
(1996): 791, except that a significantly longer
reannealing hybridization was used."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Simon.Hubbard@umist.ac.uk.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila bad, the BDGP from the isogenic strain y2; on bw sp. the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  872
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, MY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          55
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Determination of this BAC-end sequence was carried out as collaboration with the Berkeley Drosophila Genome Project The BDGP is constructing a physical map of the Drosophila.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscogawa and Aaron Mammoser in Piecer de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPC1-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

BD014992

Nucleotide sequence encode method of isolating the BB014992

BD014992.1 GI:22555799

JP 2001169788-A/2.
unidentified
unclassified. 753 encoding the same bp DNA linear PAT 27-AUG-2002 the discharge of branched amino acid, and utilization thereof.

02-MAY-2001.

This invention describes a novel isolated polynucleotide (I) containing

```
cc at least one sequence that (i) is 70% identical with a sequence that cc encodes at least one of 251 amino acid (aa) (3) or 108 aa (5) cor (5); (iii) encodes a polypeptide at least 70% identical with (3) cc or (5); (iii) is the complement of (i) or (ii), or (iv) contains at least 70% identical with (3) cc or 50%; (iii) is the complement of (i) or (ii), or (iv) contains at least 70% or 50%; (iii) is the complement of (i) or (iv) contains at least 70% or 50%; (iii) is the complement of (i), or (iv) contains at least 70% or 50%; (iii) is the complement of (iv) or 324 bp (4); (b) cc coryneform microorganisms, especially Corynebacterium, transformed with 70% or or more (I), where these are replicative DNA; (c) production of 20% or or more (I), where these are replicative DNA; (c) production of 50% or expecially overexpressed; and (d) method for isolating the brnE and/or 60% or production of production of or isolating the brnE and/or 60% or genes. (I) is used for transformation of coryneform bacteria being 60% or equivalent sequences) are amplified, 60% or equivalent sequences) are amplified. 60% or equivalent sequences and or settle brnE and/or 60% or fermentative production of branched-chain amino acids, 60% or equivalent sequences. 60% or expectifically leucine, isolation of branched-chain amino acids. 60% or isolation of branched-chain amino acids. 60% or isolation of branched-chain amino acids. 60% or isolation of the invention 60% or isolation 60% or isolatio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

This invention describes a novel isolated polynuclsotide (I) containing containing at least one sequence that (i) is 70% identical with a sequence that (containing the process at least one of 251 amino acid (aa) (3) or 108 aa (5) (2) polypeptides; (ii) encodes a polypeptide at least 70% identical with (3) (2) or (5); (iii) is the complement of (i) or (ii), or (iv) contains at least 70% identical with (3) (2) protein derived from sequences of 753 bp (2) or 324 bp (4); (b) (2) protein derived from sequences of 753 bp (2) or 324 bp (4); (b) (2) coryneform microorganisms, especially Corynebacterium, transformed with (2) one or more (I), where these are replicative DNA; (c) production of (2) one or more (I), where these are replicative DNA; (c) production of (contain L-aa by fermentation of coryneform bacteria in which the contained-chain in the contained contained the bring of the for termsforms and (d) method for isolating the bring of bring genes. (I) is used for transformation of coryneform bacteria being contained for fermentative production of branched-chain amino acids, sequences for isolation. (I) can also be used as source of primers and contained and animal nutrition. (I) can also be used as source of primers and contained process of the isolation of related sequences. Transformation with (I) contained the corynebacterium glutamicum ATCC 13032 bring and bring procesins described in the contained contained the corynebacterium glutamicum ATCC 13032 bring and bring procesins described in the contained contained the corynebacterium described in the contained contained contained the corynebacterium described in the contained contained contained the contained c
                                                                                                                                                                                                                                                                                                                                                                                                                  멁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These serve useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this pattent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nakagawa
